Statistics of State school systems

U.S. GOVERNMENT PRINTING OFFICE WASHINGTON: 1975

FOREWORD

This report presents data on what is the fundamental and, at the same time, the largest segment of education in the United States—the public elementary and secondary schools. Although the report's data tables are primarily for the 1971–72 school year, about one-fifth of the tables include trend information showing comparisons with earlier years.

The Office of Education began its periodic statistical reports on elementary and secondary education with the 1869–70 school year. Statistics for the school years 1869–70 through 1915–16 were included as part of the annual reports of the U.S. Commissioner of Education. For the years 1917–18 through 1957–58, a report was issued as a chapter in the *Biennial Survey of Education in the United States*, for each school year ending in an even number. Since 1957–58, survey reports formerly assembled in the *Biennial Survey* have been issued as independent publications. Current responsibility for these reports rests with the National Center for Education Statistics (NCES), which Public Law 93-380, in August 1974, transferred from the Office of Education to the Office of the Assistant Secretary for Education.

Recognition must be given to all members of the Elementary and Secondary Surveys Branch, NCES, for their assistance in preparing this publication, with special recognition to Judith M. Carpenter, Irene A. King, and Robert Scuka for help in preparing the statistical tables, and to Judy A. Anderson and Lena M. McDowell for their typing services.

We are grateful for assistance given by State education agency research and statistics personnel who provided local school-system data on pupils, staff, property, finance, and services. Without this help, NCES could not publish State-summarized information about public education for the Nation.

Theodore H. Drews, Acting Division Director, Division of Survey Planning and Analysis Roy C. Nehrt, Chief Elementary and Secondary Surveys Branch

INTRODUCTION

Scope of the Report

This report presents comprehensive statistics on the organization, staff, pupils, and finances of public elementary and secondary schools in the 50 States, the District of Columbia, and the outlying areas¹ of the United States. It provides detailed data for the survey year 1971–72 and historical trend data for selected items of information, in some instances going back to 1869–70.

The report, in addition, gives national (but not State) enrollment figures for the following types of schools: (1) elementary and secondary departments of institutions of higher education, (2) federally operated schools on Federal installations, (3) Federal schools for Indians, and (4) residential schools for exceptional children. Some private school data are included for regular private elementary and secondary schools. (Excluded from the survey were data for private correspondence schools; proprietary, vocational, and trade schools; and private schools of art, music, and dancing.) Table A recapitulates the types of schools (and their respective enrollments) that operate at the elementary and secondary levels.

National totals in this report represent data summations for the States constituting the United States as of

the time the data apply. Thus, for the years 1919–20 through 1957–58, national totals include 48 States and the District of Columbia. Data for Alaska are included in U.S. totals beginning with 1958–59; for Hawaii, beginning with 1959–60. Available data are given for Alaska and Hawaii for earlier years, and these may be combined with the U.S. totals when comparable totals for the 50 States and the District of Columbia are needed. (See table 1.)

Table A.—Summary of enrollment data for various types of public and nonpublic elementary and secondary schools: United States, 1971-72

| Type of school | Enrollment |
|---|---|
| Total, all schools | 51,695,000 |
| Regular schools | 51,377,000 46,081,000 5,296,000 |
| Elementary and secondary departments of institutions of higher education (model and laboratory schools) | 191,000 |
| Residential schools for exceptional children | ¹ 133,000 ² 49,000 |
| Federally operated schools on Federal installations | ³ 45,000 |

¹ Source: Digest of Educational Statistics, 1973 (OE-74-11103).

¹ American Samoa, Canal Zone, Guam, Puerto Rico, Trust Territory of the Pacific Islands, and the Virgin Islands.

² Source: Statistics Concerning Indian Education, Fiscal Year 1972, U.S. Department of Interior.

³ Source: Administration of P.L. 81-874 and 81-815 (OE-73-07300).

Direct comparison should not be made between the District of Columbia and individual States because the District of Columbia school system corresponds to that of other large cities rather than to that of an entire State. The latter, for instance, has rural areas in addition to densely populated urban areas.

Sources of Data and Survey Procedures

Much of the data for this report was furnished by the departments of education of the 50 States, the District of Columbia, and 7 outlying areas in response to report forms (OE 2350-11 and 2350-12) developed by the National Center for Education Statistics. OE Form 2350-11 is keyed to Handbook I, The Common Core of State Education Information (OE Bulletin 1953, No. 8), which provides uniform educational terminology and definitions. The financial items in OE Form 2350-12 are keyed to Handbook II, Financial Accounting for Local and State Systems (OE Bulletin 1957, No. 4), which has been the basic guide to financial accounting for public school systems.

This report summarizes information from many reporting units. The State summary data for local schools are based on data supplied by local or intermediate administrative units and represent the cooperative efforts of about 3.5 million school personnel.

The survey forms were mailed to each State or outlying area 6 months after the end of the school year, because most State education agencies are unable to collect and summarize detailed data for their school districts in a shorter time. The scheduled response date was 4 months after the mailing, although respondents were asked to send the information as soon as available. In many cases the data were received several months after the scheduled response date; 50 percent of the States took 6 months to respond and 15 percent took even longer. Since the reports in this series are both comprehensive and historical, and require many months of effort by the State education agencies and the National Center for Education Statistics, publication is not possible until about 2 years after initial mailing of the survey forms to the respondents.

Data-processing procedures sought maximum accuracy and completeness. Each completed State report form

was carefully reviewed for mathematical accuracy, internal consistency, and general adherence to prescribed definitions and terminology. The data were then compared with those for previous years and with published reports of the respective States. Letters and telephone calls helped to obtain missing data from respondents and to resolve outstanding questions.

In some cases, data furnished by the States were supplemented by information or records in the Education Division of the U.S. Department of Health, Education, and Welfare. Annual reports covering the National Defense Education Act, the Elementary and Secondary Education Act, and Public Laws 815 and 874 (School Assistance to Federally Affected Areas) provided additional information on revenue from the Federal Government.

To assure comparability in reporting receipts from the Federal Government for the School Lunch and Special Milk Programs and for net expenditures for "Food Services," data were adjusted on the basis of reports issued by the U.S. Department of Agriculture. Publications of the Governments Division, U.S. Bureau of the Census, were consulted to obtain more complete data on State and local education agency contributions to employee retirement systems. Data on bonds issued were supplemented by data from records in the Office of the Assistant Secretary for Education and the publication Bond Sales for Public School Purposes, 1971-72.

Except for the adjustments just noted, the statistics presented in this report are generally based upon the information supplied by the chief education offices of the States and outlying areas. Not all States were able to provide every item of information requested; however, all data furnished by the States have been included, and in only a few areas was it necessary to make estimates for missing data.

ADMINISTRATIVE ORGANIZATION OF PUBLIC ELEMENTARY AND SECONDARY EDUCATION

Constitutionally, public education is not a responsibility of the Federal Government but of the States. Generally, States delegate operational and financial responsibilities to county and other supervisory districts and to local school agencies.

State Boards of Education

During the 1971–72 school year, State boards of education for elementary and secondary schools operated in all States except Wisconsin. In 43 States, these boards also supervised vocational education; in the other 7 States (Colorado, Hawaii, Illinois, Indiana, Oklahoma, Washington, and Wisconsin), there were separate State boards for vocational education.

A total of 567 persons served on State boards of education, which ranged in size from 3 members in Mississippi to 30 in Illinois (table 2). Although most State boards were served by State education agency personnel, 27 States reported separate board staffs, totaling 231 professional employees and 182 secretarial and clerical assistants in 1971–72. Staff size averaged 15 members, ranging from 1 each in 12 States to 119 in Illinois.

State Departments of Education

Each State has an education agency headed by a superintendent or commissioner of education. In 1971–72, staffs of State education offices totaled 22,300 persons, (50 chief State school officers, approximately 11,000 supervisory and professional staff members, 10,800 secretarial and clerical assistants, and 400 plant-operation and plant-maintenance employees [table 2]). Supervisory and professional staffs of the State offices include deputy and assistant superintendents or commissioners, directors of divisions, chiefs of organized services, consultants, specialists, and regional and district supervisors.

Intermediate Administrative Units

With continued reorganization and consolidation of local education agencies, the need for intermediate administrative units appears to be declining. For the 1971–72 school year, 21 States had 1,111 such units operating between the State and local levels, as compared with 1,433 reported in 1969–70 and with 1,782 in 1961–62 for 26 States. The chief responsibility of these units, which include counties, parts of counties, and supervisory unions, is not school operation but rendering consultative, advisory, and statistical services, and exercising regulatory and inspection functions. Many intermediate units also provide such services as operating special classes and supervising instruction, health, attendance, and pupil transportation.

The 21 States with intermediate administrative units reported approximately 4,600 intermediate district board members in 1971–72 (table 3). Staffs of intermediate units consisted of about 1,700 superintendents and other administrative staff, 1,400 instructional personnel (other than principals and teachers), 300 other professional personnel (attendance officers, visiting teachers, and health personnel), 1,000 secretarial and clerical assistants, and approximately 3,700 miscellaneous personnel.

Local Education Agencies

The actual operation of schools is generally the responsibility of local education agencies (LEA's). These LEA's are organized as public corporations under the jurisdiction of boards of education responsible for administration of all public schools in the area. LEA's provide the machinery for local control of schools and are largely responsible for the location and size of schools, the types of educational programs and services offered, and the amount of financial support

to be provided locally. The size and characteristics of LEA's vary from State to State. (See table 4).

Numbers of systems in the States have been declining for years as a result of reorganization and consolidation. The total number of systems in the United States in 1971–72 was approximately 17,300 as compared with 19,200 in 1969–70 and 22,000 in 1967–68 (table 5). About 450 of the total in 1971–72 operated no schools and made other arrangements for the education of the pupils in their jurisdictions.

Table 6 gives the number of local school systems by enrollment-size groupings. Of the operating school systems reporting pupils enrolled, 30 percent had fewer than 300, 26 percent had between 300 and 1,000, 33 percent had between 1,000 and 5,000, and 11 percent had 5,000 or more. Thus, over one-half of the local school systems are still relatively small with under 1,000 pupils despite considerable progress in consolidating small units.

Each school system has a school board, usually consisting of from three to nine members, vested with policymaking and supervisory authority. The vast majority of school boards are elected by popular vote, while others are appointed by various government officials. In 1971–72, there were 98,000 school board members, a decrease of 1,700 (or 2 percent) from the number in 1969–70. Administrative staff members of local school systems consisted of 12,800 superintendents and 18,900 aides. The instructional staff of 2,321,600 constituded 65 percent of all local school system employees.

Noninstructional personnel in local school systems (tables 14 and 15) are engaged in activities such as attendance enforcement, health and recreation, pupil transportation, the lunch program, and the operation and maintenance of the school plant. In 1971–72, 48 States and the District of Columbia reported 1,194,200 noninstructional personnel. It is estimated that approximately 1,220,000 noninstructional personnel were employed in local school systems in the United States.

Overall, some 3.7 million persons were directly concerned with the operation of the public elementary and secondary schools in 1971–72. These included board members (generally serving without compensation); administrative staffs at the State, intermediate, and local levels; and instructional and noninstructional staffs. It is significant that only 1 percent served at the State and intermediate levels.

Table 9 shows the State average size of the local school

systems in terms of schools and pupils. For the entire United States, operating school systems had an average of more than 5 schools, an average daily attendance (ADA) of about 473 pupils per school, and a total ADA of about 2,510 per system. However, the enrollment of the median school district was only 791. Furthermore, 1 percent of the systems enrolled 25,000 or more pupils and had about 29 percent of all public school students in the United States2. Except for Hawaii, which operates as a single school system, large numbers of schools per system were reported by Maryland (54), Florida (29), and West Virginia (25)all of which operate countywide school systems. Small numbers were reported by Nebraska, North Dakota, and Vermont-each averaging about 2 schools per system. (Because of a change in procedures requiring that combined elementary-secondary schools be reported as single units, these data are not entirely comparable with data for years prior to 1969-70; see section on Number of Public Schools.)

Excluding Hawaii, which has a single State-operated school system, the States having the largest ADA per system were Maryland (34,875), Florida (20,202), and Louisiana (11,696). The smallest ADA per system was noted for such sparsely populated States as Montana, Nebraska, North Dakota, and Vermont.

² Education Directory of Public School Systems, 1971-72 (OE-72-107), table 1.

NUMBER OF PUBLIC SCHOOLS

A school is defined³ for this report as "a division of the school system consisting of a group of pupils composed of one or more grade groups, organized as one unit with one or more teachers to give instruction of a defined type, and housed in a school plant of one or more buildings. More than one school may be housed in one school plant, as is the case when the elementary and secondary programs are housed in the same school plant."

In 1971–72, there were 89,400 public elementary and secondary day schools (64,000 elementary, 23,600 secondary, and 1,800 combined elementary-secondary [table 7]). Of the 64,000 elementary schools, approximately 1,800 were one-teacher schools.

Data are reported on combined elementary-secondary schools organized as a single unit with both elementary and secondary grades. Schools with elementary grades (65,800) represent the sum of the 1,800 combined schools and the 64,000 solely elementary schools. The same 1,800 are added to the 23,600 solely secondary

schools to obtain a total of 25,400 schools with secondary grades.

A steady reduction in the number of elementary schools in recent years is the result of large-scale closings of one-teacher schools, school district reorganization, and increased pupil transportation services. During the past 10 years, the number of one-teacher schools has dropped sharply—from 13,300 in 1961—62 to 1,800 in 1971—72 (table 8).

The extensive school building program necessitated by rapidly rising enrollments in recent years did not increase the number of elementary and secondary schools, because the newer schools are larger and accommodate more pupils than the older schools. From 1961–62 to 1971–72 the average enrollment per school (both elementary and secondary) increased from 350 to 516. States having the largest ADA per school included Hawaii (816), New York (704), and Florida (694). Those with the smallest ADA per school included South Dakota (153), Nebraska (156), and North Dakota (168).4

INSTRUCTIONAL STAFF IN PUBLIC SCHOOLS

"Instructional staff" are those employees who render direct and personal services that embrace teaching, aid for teaching, or improving the teaching-learning

situation. Included are supervisors of instruction, principals, teachers, audiovisual and television instructors, guidance personnel, librarians, and psychological personnel.

³ The Common Core of State Educational Information, State Educational Records and Reports Series: Handbook I, Bulletin 1953, No. 8.

For further information on enrollment, see section on Enrollment in Public Elementary and Secondary Schools.

Supervisors of instruction or consultants provide direct leadership to other instructional staff for improving the learning situation and instructional methods at a particular level or in a particular subject. Principals are the administrative heads of schools, usually with major responsibility for school coordination and supervision. The instructional staff exclusive of supervisors of instruction and principals is referred to in this report as the "nonsupervisory instructional staff."

Data on personnel are reported in terms of number of positions rather than number of individuals occupying those positions during the school year. In 1971–72, the instructional staff totaled 2,321,600—an increase of 68,100 (3.0 percent) over the number in 1969–70 (table B)—and consisted of 37,500 supervisors of instruction, 97,200 principals, 2,069,800 classroom teachers, 42,000 school librarians, 52,400 guidance personnel, 7,400 psychological personnel, and 15,400 other nonsupervisory instructional personnel (tables 10 and 13).

Separate data on classroom teachers were collected for the first time in the 1953-54 survey. In earlier years, information was requested for the combined group of classroom teachers and other nonsupervisory instructional staff. Some States, however, do not report nonsupervisory instructional staff separately, and thus the figures on classroom teachers include an undetermined number of other instructional staff. Based on the reported numbers, there were 2,069,800 classroom teachers (1,126,300 elementary and 933,500 secondary); these accounted for 89 percent of the 1971-72 total instructional staff (table 12).

Beginning with the 1953-54 survey, respondents were asked to report separately the numbers of men and women classroom teachers. Indications are that the proportion of male teachers has increased during the period 1961-62 to 1971-72, at both the elementary and secondary levels, moving upward from 14.5 to 16.7 percent at the elementary level, and from 53.3 to 54.4 percent at the secondary level. Since such percent

changes are of different bases, they are not additive, and the overall data show that during the 10-year period the percent of male teachers rose from 29.9 percent to 33.6 percent.

Table B.—Instructional staff, enrollment, and instructional staff per 1,000 pupils enrolled in public elementary and secondary schools: United States, 1929–30 to 1971–72

| Year | Total instructional staff ¹ | Total enrollment (K-12, including postgraduates) | Instructional staff per 1,000 enrolled pupils |

In full-time equivalents; includes supervisors, principals, classroom teachers, and other instructional personnel.

NOTE.—Includes Alaska and Hawaii, beginning in 1959—60.

GROWTH OF SCHOOL-AGE AND TOTAL POPULATIONS

The elementary-secondary school population (ages 5–17 years) increased 13.5 percent between 1961–62 and 1971–72, whereas the total population increased by 12.7 percent. The 53 million school-age children in October 1971 represented 25.5 percent of the total U.S. population of 206 million. Recent years have seen

a reversal of the trend in which the school-age population increased at a faster rate than the total population: in 1967–68, school-age population peaked at 26.1 percent of total population and in 1969–70 and 1971–72 it decreased to 25.8 and 25.5 percent, respectively.

ENROLLMENT OF INDIVIDUAL AGE GROUPS OF THE SCHOOL-AGE POPULATION

Table C gives the estimated school enrollment of the population 5 to 17 years old by age and sex as of October 1971. The data include pupils enrolled in public and nonpublic elementary and secondary schools on a full-time or part-time basis in day and

evening sessions. Compulsory school-attendance laws have made attendance of the 7- to 13-year age group almost universal. Of the 14- to 17-year-old population, 92.7 percent were enrolled (98.5 percent of the 14- and 15-year-olds and 86.7 percent of the 16- and 17-year-olds).

ENROLLMENT IN PUBLIC ELEMENTARY AND SECONDARY DAY SCHOOLS

Information concerning the number of pupils served by the public schools from prekindergarten level through the secondary grades is needed as a basis for planning the educational program. Data on pupil membership

¹ Comparisons of the ages of the population and their normal school levels are based on the following assumptions: Kindergarten, 5 years old; grades 1 to 8, 6–13 years old; and grades 9 to 12, 14–17 years old.

and attendance, as well as on the number of days in the annual school term, indicate the extent of the school services provided (tables 16 through 23).

Total Enrollment

Total enrollment in public elementary and secondary day schools has shown a more consistent growth, decade by decade, than has the elementary-secondary school-age population. Pupil enrollment rose from 7.6 million in 1870–71 to 26.4 million in 1933–34, a high not to be equalled or surpassed until 1951–52. The lower number of births during the depression years of the 1930's and the war-time conditions that followed resulted in a gradual decline in enrollments to a low of 23.2 million in 1944–455, when the downward trend was reversed. The subsequent growth has been steadily upward, reaching an alltime peak of 46.1 million in 1971–72 (table D).

Cumulative public school enrollment increased 1.0 percent between 1969-70 and 1971-72. The rate of

NOTE.—Because of rounding, details may not add to totals.

SOURCE: U.S. Bureau of the Census. *Current Population Reports*, Series P-20, No. 241. (Based on a sample survey of approximately 47,000 households.)

growth, however, varied considerably among the States, with 12 States and the District of Columbia showing decreased enrollments (table 19).

Enrollment information in this survey is collected on a State-by-State basis. The cumulative enrollment represents a count of the total number of different pupils registered at any time during the school year in each State. Pupils enrolled in two or more States during the school year are counted more than once, thus abnormally increasing the cumulative enrollment figure for the Nation. The membership-by-grade data are an unduplicated count of pupils in membership in the fall of 1971 (table 16). The enrollment-by-grade data in table 18 reflect the increase referred to above.

Enrollment in Kindergarten and Grades 1 through 8

Enrollment in kindergarten and grades 1 through 8 reached a peak of 21.3 million pupils in 1929–30 (table 1). It declined in each subsequent year through 1944–45 (to 17.7 million) and rose steadily since then until 1971–72, when a decrease of 0.3 million was reported from 32.6 million in 1969–70. The slowing in

² Population data for the civilian population, excluding the relatively small number of inmates of institutions.

³ In addition, 1,040,000 pupils over 17 years of age (589,000 boys and 451,000 girls) were enrolled in elementary and secondary schools, or a grand total of 51,541,000.

⁵ Biennial Survey of Education in the United States, 1946-48.

Excludes 283,000 students (129,000 boys and 154,000 girls) enrolled in college.

the rate of growth in the school-age population together with a decline in the birth rate accounts for the reversal in enrollment for nursery-kindergarten and grades 1 through 8 (tables 1 and 16).

Enrollment in Grades 9 through 12

The enormous increase in the number of pupils enrolled in grades 9 through 12 represents one of the major developments in the public school system. While the population of high school age (14 to 17 years) more than doubled since 1889–90, enrollments in grades 9 through 12 multiplied more than 60 times. High school enrollments, after reaching a peak of 6,714,000 in 1940–41, declined to a low of 5,554,000 in the war year 1943–44. Since then, the trend has been generally upward, reaching a record high of 13,816,000 in 1971–72 (table 16). This enrollment growth reflects the increased birth rate following World War II as well as a continuing trend for a greater percentage of the high-school age group to attend high school.

Average Daily Membership

The average daily membership (ADM) for a school year is the average number of pupils belonging (present and absent) each day. It is computed for an individual school by dividing the aggregate of pupil-days' membership by the number of days the school was actually in session. The ADM for a State is the sum of the ADM's for all the schools, which may vary in length of school terms. The ADM in 1971–72 was an estimated 45.2 million pupils, an increase of 1.0 percent over the 44.7 million estimated for 1969–70. The 1971–72 total includes estimates for the five States that did not report this information (table 22).

For the years prior to 1955-56, membership figures were not available nationally to compute the necessary ratios. The ratio of average daily attendance (ADA) to ADM has shown minor fluctuations since 1955-56, when the percentage was first estimated on a national basis. ADA as a percent of ADM was 93.5 in 1971-72, the same percent as in 1955-56.

Average Daily Attendance

The average daily attendance (ADA) for an individual school during a school year is the aggregate days'

attendance divided by the number of days the school is actually in session. The ADA for a State is the sum of the ADA's for all schools in the State which may have varying lengths of school terms. The ADA rose from 41.9 million pupils in 1969–70 to 42.3 million in 1971–72, or 0.8 percent. The ratio of ADA to total enrollment was 91.7 percent in 1971–72 (table D).

Length of School Term

The average length of the school term for a State is the aggregate days of attendance of all pupils divided by the ADA and reflects the number of days schools are actually in session. The average length of school term increased from 132 days in 1869–70 to 173 days in 1929–30. In the 1950's, the school term leveled off at about 177–178 days. A peak of 179 days was reached in 1961–62 and was slightly less but about the same for the following years, reaching a new high of 179.3 in 1971–72 (tables 1 and 22).

Table D.—Relationship of average daily attendance (ADA) to enrollment in public elementary and secondary schools: United States, 1929-30 to 1971-72

| Year | Enrollment 1/(in thousands) | ADA (in thousands) | ADA as percent of enrollment |

¹ Membership as of October 1, beginning in 1967–68.

NOTE.-Includes Alaska and Hawaii, beginning in 1959-60.

PUBLIC HIGH SCHOOL GRADUATES

As would be expected from the enrollment growth in grades 9 to 12, the number of public high school graduates has increased manyfold during the present century. After reaching a high of 1,161,000 graduates in 1941-42, the number fell to fewer than 1 million during the remaining war years (table E). In the postwar period the number fluctuated upward, reflecting the changes in the number of young people reaching the age at which pupils generally graduate from high school and the greater holding power of the schools. After remaining at about the million mark through 1951-52, the number of graduates increased at varying rates in the following years, reaching a high of 2,708,000 in 1971-72. The graduates in 1971-72 represented 94.6 percent of the 2,862,000 pupils enrolled in the last year of high school at the beginning of the 1971-72 school year. Percentage figures have fluctuated narrowly from 93 to 95 percent during the past decade.

The holding power of public high schools steadily increased since the mid-1950's. However, beginning in 1969–70, the percents of graduates of the class entering grade 9 four years earlier show declines—from 78.5 in 1968–69 to 78.1 in 1969–70 and 75.9 in 1971–72 (table E).

In addition to the graduates from regular public day high schools in 1971–72, some 30,000 received high school graduation diplomas for attendance at public evening and adult schools, and 169,000 persons were granted high school equivalency certificates on the basis of examinations (table 24). Not included are an estimated 300,000 nonpublic high school graduates.

PUPIL TRANSPORTATION SERVICES PROVIDED BY PUBLIC SCHOOLS

State legislation for reorganizing school systems and consolidating widely scattered school attendance areas has greatly increased the need for pupil transportation services. Also, many school districts have found that furnishing pupil transportation services can help equalize educational opportunity.

During the 1971-72 school year, 19.5 million public school pupils, or 46 percent of the pupils in average daily attendance, were transported to schools at public expense (table 25). In addition, some 539,000 non-public school pupils were transported at public expense. The proportion of public school pupils who

were transported ranged from 19.2 percent in Nebraska and 20.8 percent in Hawaii to 72.3 percent for West Virginia and 67.5 percent for Maine. Further increases in the numbers of pupils transported are anticipated as small schools, which still exist in substantial numbers, are replaced by larger centralized schools.

In 1971-72, 235,000 school buses (having capacities for 12 or more pupils) and 26,000 other vehicles transported 19.6 million school children traveling 2.4 billion miles on regular school bus routes to and from school. Total public expenditures for pupil transportation—including operation, maintenance, and

the replacement of buses (but not capital outlay for additional buses)—were \$1.5 billion, or 3.6 percent of the total current expenditures for public elementary and secondary education. The average annual cost per public school pupil transported was \$77 in 1971—72,

with the range in State per-pupil costs extending from \$36 in South Carolina and \$38 in Alabama and North Carolina to \$177 in Alaska, \$164 in New York, and \$159 in Wyoming (tables 25 and 42).

PUBLIC SCHOOL LUNCH PROGRAMS

In 1971–72, an average of 21.7 million pupils per day were served lunch in organized school lunch programs, representing about 51 percent of the pupils in average daily attendance. Among individual States, percentages ranged from 24 to 88, with the schools of 12 States serving lunches to more than two-thirds of their pupils and five States to less than one-third. School lunch programs were operated for 6 months or more in 77,900 public school plants during the year (table 26).

These data relate to all lunch programs operated from funds under control of the school administrative unit; they include those both receiving and not receiving Federal school lunch aid.

In June 1946, the 79th Congress passed Public Law 396, generally known as the National School Lunch Act, which provided for cash grants and for the allocation of surplus commodities for school lunch purposes by the Department of Agriculture through

State education agencies. Additional commodities are made available under provisions of section 32 of Public Law 320, 74th Congress, which authorizes purchase and distribution of foods under surplus removal programs as one method of encouraging consumption of agricultural commodities. This program was amended under section 416 of the Agricultural Act of 1949 to provide for distribution to schools of commodities acquired under price-support legislation.

Federal assistance to school lunch programs was initiated in 1935 on a limited basis as one method of providing a market for surplus agricultural commodities. Some 20 years later, the Agricultural Act of 1954 authorized reimbursement payments to elementary and secondary schools participating in the Special School Milk Program. In 1971–72, funds amounting to \$794 million and commodities valued at \$339 million were contributed by the Federal Government for operation of the lunch and milk programs in public schools (table 29).

SOURCES OF INCOME FOR PUBLIC SCHOOLS

Funds for operating the public schools are derived almost exclusively from local property taxes, State sales and income taxes, and Federal income taxes. For elementary and secondary education, very little if any of the operating revenues are derived from such nonpublic sources as gifts, fees, and tuition.

Funds for school construction and the provision of physical facilities are generally obtained at the local level through issuance and sale of school bonds (creating debt) and from current revenues or the accumulation of current revenues. Some States grant or loan funds to local education agencies for school construction.

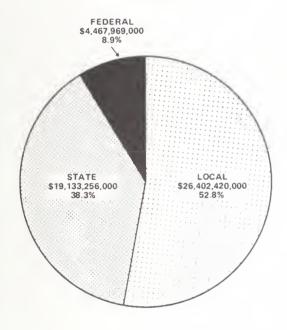

Revenues

Revenues, which constitute the major portion of school income, are defined as additions to assets that do not increase the school indebtedness and do not represent exchanges of school property for money. They are derived regularly from specific sources, such

as appropriations from taxes levied for general purposes by Federal, State, county, and local governments; receipts from taxes levied specifically for school purposes; income from permanent funds and endowments; and income from leases of school lands and such miscellaneous sources as tuition, fees, interest on bank deposits, and gifts (chart 1).

Chart 1.—Revenues for public schools from Federal, State, and local sources:
United States, 1971–72

(Total revenues \$50,003,645,000)

Data for chart 1

| Item | Amount | Percent |
|---------|------------------|---------|
| Federal | \$ 4,467,969,000 | 8.9 |
| State | 19,133,256,000 | 38.3 |
| Local | 26,402,420,000 | 52.8 |

Revenues have shown a continuing trend upward since World War II. In 1971-72, total revenues were \$50.0 billion, compared with \$40.3 billion in 1969-70 (tables F and G). While the proportion from Federal

sources has generally risen over the years (from 0.4 percent of the total in 1929–30 to 2.8 percent in 1947–48 and 8.9 percent in 1971–72), it is still a relatively minor source. It should be noted that Federal support of education has not been in the form of general aid but has been designated for specific purposes. These purposes include aid for vocational education, for school lunches, for the school systems receiving funds under Public Laws 81-815 and 81-874, and for a variety of special programs under the National Defense Education Act and the Elementary and Secondary Education Act.

NOTE.-Because of rounding, deteils mey not edd to totels

State support of public schools (generally derived from nonproperty tax sources such as income, sales, and business taxes) tends to broaden the school tax base and to aid in equalizing educational opportunity within the State. Revenues from such sources increase with rises in price levels, population, and volume of business transactions.

The proportion of receipts from State sources increased from 16.9 percent in 1929–30 to 30.3 percent in 1939–40, then to a peak of 39.8 percent in 1949–50. From 1951–52 to 1967–68, the State percentage has fluctuated in a narrow range between 37.4 and 39.5 percent, reaching a new high of 39.9 percent in 1969–70 (table G). In 1971–72, receipts from State sources accounted for 38.3 percent of the total. In that year the proportion of State funds in individual States ranged from 6.2 percent in New Hampshire to 69.5 percent in Delaware and 86.7 percent in Hawaii, which has a State-operated school system (table 30).

Because of increased Federal and State support, the proportion of revenues from local and county sources (derived largely from property taxes) has fluctuated downward in recent years, from 58.3 percent in

1947-48 to 52.1 in 1969-70 and 52.8 percent in 1971-72 (tables G and 30).

| 971-72 | 100.0 | 8.9 | 38.3 | 52.8 |

NOTE.—Includes Alaska and Hawaii, beginning in 1959—60. Because of rounding, details may not add to totals.

Receipts from other local revenue sources (gifts, and tuition and transportation fees received from patrons) were \$1.3 billion, or 2.6 percent of total revenues in 1971-72 (tables 29 and 30).

State variations in the proportions of receipts from Federal, State, and local sources are the product of available financial resources as well as the unique fiscal and taxing characteristics of each State.

Nonrevenue Receipts

Nonrevenue receipts are defined as those receipts which either incur a future obligation or change the form of an asset from real and personal property to cash and therefore decrease the net amount and value of real and personal school property. Money received from loans, the sale of bonds, the sale of property purchased from capital funds, and proceeds from insurance adjustments constitute most of the nonrevenue receipts. Since most nonrevenue receipts are used for capital outlay, they have tended to fluctuate with the amount of school construction activity.

After reaching a low of \$94.8 million in 1943–44, reflecting the curtailment of the school building program during the war, nonrevenue recipts rose markedly during the postwar period. Specifically, the rise was from \$964 million in 1949–50 to \$2.6 billion in 1959–60, although it fell off to \$2.5 billion in 1961–62 and 1963–64. The receipts then rose to \$3.2 billion in 1969–70 and to \$3.9 billion in 1971–72 (table 28).

Balances Carried Over From Previous Year

In 1971-72, balances carried over from the previous year were \$6.5 billion for reporting States. Such beginning balances are not a surplus of unused funds but are considered an important part of the regular funds available for spending, which are generally earmarked for specific purposes. For the 43 States reporting balances, 47.7 percent of the total balances was earmarked for current operation, 42.3 percent for capital outlay, and 10.0 percent for bond interest and redemption. It should be observed that, although the balance of \$6.5 billion at the beginning of the 1971-72 school year showed a 19.1 percent increase over the \$5.4 billion balance reported for the corresponding date 2 years earlier, the increase can largely be attributed to the increase of 18.1 percent in expenditures and a need for corresponding increases in balances. Balances normally represent the working funds needed to maintain continuing programs and reserves for future capital expenditures or debt retirement (table 28).

EXPENDITURES FOR PUBLIC SCHOOLS

Total amounts expended for public schools include payments for current expenses, capital outlay, and debt service. Current expenditures comprise similar items of expense in schools of all the States, since they pertain to the ongoing expenses of school operation. However, the other two categories—capital outlay and debt service—are subject to wide fluctuations among the States, since they relate closely to school construction programs, which come at irregular intervals.

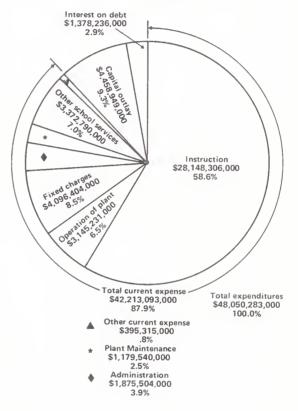

Total Expenditures

A total of \$48.1 billion was spent in 1971–72 for public schools, an increase of 18 percent over the \$40.7 billion spent in 1969–70. Included in the total were current expenditures for elementary and secondary day schools, community services, summer schools, capital outlay, and interest on school debt (chart 2).

In any historical review of school finance data, allowance must be made for the changing value of the dollar. The dollar in the 1971–72 school year, for example, bought about one-third (34 percent) of the commodities and services that could be purchased for a dollar in 1939–40. Tables 1, 47, and 49 present historical trends in expenditure data in both actual unadjusted dollars and in dollars adjusted to reflect their purchasing power in 1971–72.

Factors contributing to the increase in school expenditures over the years, in addition to expanding school enrollments and depreciaiton of the dollar, include the following: (1) schools are in session for longer terms, (2) school employees are receiving relatively higher salaries, (3) the average number of pupils per teacher has been reduced, (4) the educational programs have been enlarged to include additional subjects and services, (5) secondary enrollment, with higher unit costs, represents an increasing proportion of total enrollment, and (6) migration of the school-age population has increased the need for additional new school buildings.

Chart 2.—Expenditures for public schools, by purpose: United States, 1971—72

Data for chart 2

| l tem | Amount | Percent |
|--|---|---|
| Instruction | \$28,148,306,000 3,145,231,000 4,096,404,000 1,875,504,000 1,179,540,000 3,372,790,000 | 58.6 6.5 8.5 3.9 2.5 7.0 |
| Other current expense | 395,315,000 | .8 |
| Capital outlay Interest on debt | 4,458,949,000 1,378,236,000 | 9.3 2.9 |
| Total current expense Total expenditures | 42,213,093,000 48,050,283,000 | 87.9 100.0 |

Bond redemption, while a disbursement item in any one year, is not included in expenditures, since it is in fact the repayment of funds borrowed and expended in a prior period. Its inclusion in a statistical series would duplicate the previously reported expenditures. A breakdown of total expenditures and percentage by major account for selected years is given in table H.

Current Expenditures

In 1971-72, current expenditures for public elementary and secondary day schools amounted to \$41.8 billion, or 87 percent of expenditures for all educational purposes (tables H and 31). Current expenditures for other programs under jurisdiction of local boards of education (summer schools and community services) totaled \$395 million in 1971-72. Data for these programs are incomplete in some respects. However, the apparent decrease in expenditures for these programs reflects the exclusion of junior colleges and adult education programs from this report. Most of such programs now have separate boards of education.

The proportion of expenditures for administration (State, intermediate, and local levels combined), which has remained about the same for a number of years, was 3.9 percent of total expenditures in 1971-72. The proportion for plant operation (including salaries of janitors and the cost of fuel, water, power, supplies, etc.) continued a decline started during the 1940's and dropped to 6.5 percent of total expenditures in 1971-72. For plant maintenance (activities concerned with keeping the grounds, buildings, and equipment at their original condition of completeness or efficiency, either through repairs or by replacement of property), the percentage has shown little change in recent years. In 1971-72, expenditures for this purpose constituted 2.5 percent of the total. Other school services (including attendance and health services, the school lunch program, and pupil transportation) accounted for 7.0 percent of total expenditures in 1971-72 (tables H and 32).

The two major accounts that have shown gains in the proportions they constitute of total expenditures are *instruction* and *fixed charges*. Principally as a result of increases in salaries of instructional personnel and a

reduction in the pupil-teacher ratio, the proportion of expenditures for instruction rose from 54.6 percent in 1961–62 to 58.6 percent in 1971–72. In addition to salaries, the instruction account also includes the cost of free textbooks, teaching supplies, school library books, and other instructional supplies and expenses. The proportion of total expenditures for fixed charges (including State, intermediate, and local payments to teacher retirement funds, social security, insurance premiums, and rent) rose from 5.9 percent in 1961–62 to 8.5 percent in 1971–72. This increase in fixed charges may be attributed mainly to larger employer retirement contributions, including payments for social security, in several States.

Current Expenditures Per Pupil

Although overall figures on current expenditures indicate general trends, it is only when such expenditures are related to the pupil load that these costs are brought into sharp relief. A unit of measure recommended for computing per-pupil expenditures is average daily membership (ADM), since it more accurately considers the number of pupils for whom provision is made rather than the number actually present. However, ADM was not available for all States. The estimated average annual current expenditure per pupil in ADM for the Nation was \$926 in 1971–72 (table 48).

The annual current expenditure per pupil in average daily attendance (ADA) increased from an average of \$418 in 1961-62 to \$990 in 1971-72. For 1961-62, average expenditure per pupil in ADA by State ranged from \$229 to \$629. This amounted to a difference of \$400, revealing an amount almost three times as great in the highest as in the lowest State. Ten years later (1971-72), the dollar difference between the highest and lowest State averages (\$1,005) had more than doubled, yet the highest average for a State (\$1,662) was still almost three times the lowest (\$657). State averages, however, give no indication of the range of expenditures among local school agencies within States. Perhaps the principal value of per-pupil expenditure comparisons is to call attention to differences, thus giving impetus to further study (tables 48 and 49).

Table H.-Summary of expenditures for public schools, by major account: United States, 1929-30 to 1971-72

NOTE: 8ecause of rounding, details may not add to totals. Data include Alaska and Hawaii, beginning in 1959-60. Data in parentheses are components of subtotals.

Prior to 1963—64, included expenditures for summer schools and adult and community college programs of education in California.

Includes expenditures for State, intermediate, and local administration.

Prior to 1963—64, items under "other school services" were listed under "auxiliary services," a more comprehensive classification that also included community services.

Includes direct expenditures or deficits for extracurricular activities for pupils (if paid from school funds) and any other services for public school pupils not included elsewhere.

Prior to 1953—54, data shown for adult aducation represent combined expenditures for adult aducation, summer schools, and community colleges.

Bagining in 1971—72, data for adult aducation and community colleges were excluded from this report.

Excludes capital outlay by State and local schoolhousing authorities prior to 1965—66.

Average Salaries of Instructional Staff

Before 1919–20, salary information was available only for teachers. Since then, the Office of Education has been collecting data on salaries for the entire instructional staff, including supervisors of instruction, principals, teachers, librarians, guidance and psychological personnel, and so forth. Average annual salaries of the instructional staff are obtained by dividing the total amount paid to the instructional staff as salaries by the full-time-equivalent number of such personnel.

Except for several depression years in the middle 1930's, average salaries of the instructional staff have increased steadily. The average annual salary in unadjusted dollars rose from \$5,700 in 1961–62 to about \$10,000 in 1971–72, an increase of 77 percent in 10 years. However, when an adjustment is made to reflect the rise in the Consumer Price Index (restating the 1961–62 average salary in 1971–72 dollars), the increase was 29 percent.

The top five States, with average salaries above \$11,000, contained 25 percent of the instructional staff of the Nation, while the lowest five States, with average salaries of \$7,700 and below, contained about 4 percent of the instructional staff members. As shown in table 47, the three States with the highest average were Alaska (\$14,584), Michigan (\$12,159), and New York (\$12,100). The three with the lowest were Mississippi (\$6,716), Arkansas (\$7,217), and North Dakota (\$7,620).

Capital Outlay

Capital outlay embraces any expenditure that results in acquisition of fixed assets or additions to fixed assets. Included in capital outlay are expenditures for land, construction and remodeling of buildings, additions to buildings, improvement of grounds, and purchase of initial or additional equipment. Such expenditures are generally financed from bond issues or other types of borrowing, and fluctuate much more widely than current expenditures.

Following World War I there was a period of accelerated school construction activity, culminating in 1925–26, when expenditures for this purpose amounted to \$411 million (about one-fifth of total expenditures). Capital outlay expenditures then declined, reaching a low of \$59 million (3.4 percent of

total expenditures) in the depression year 1933-34. An upturn in the second half of the decade was cut short by the outbreak of World War II and capital outlay fell to a new low of \$54 million in 1943-44 (2.2 percent of total expenditures). The tremendous growth in enrollments during the postwar period and the accumulated backlog of construction needs necessitated large outlays for school facilities and equipment. Capital outlay increased from \$1.5 billion in 1951-52 to \$2.9 billion in 1961-62 and \$4.7 in 1969-70 and was \$4.5 billion in 1971-72. These outlays, however, represented only 9.3 percent of total expenditures in 1971-72, compared with 15.6 percent in 1961-62.

Amounts expended by State and local public school-housing authorities are included in the expenditures for capital outlay reported in table 43. The annual capital outlay per pupil in ADA was \$105.53 in 1971–72 (table 48). For individual States, the per-pupil expenditure ranged from \$26 to \$407. A State-by-State comparison for any one year may not be meaningful because a capital outlay program in any State may extend over several consecutive years.

Interest on School Debt

The third major category of school expenditures (after current expenditures and capital outlay) is interest payments on the bonded and other school debt. Reflecting the increasing long- and short-term indebtedness incurred by local school systems and State agencies, interest payments jumped from \$588 million in 1961–62 to \$1.4 billion in 1971–72 (table 44). In this interval, interest payments per pupil in ADA rose from \$17 to \$33. In 1971–72, interest payments represented 2.9 percent of total expenditures, compared with 3.2 percent in 1961–62 and peaking at 3.3 percent in 1963–64.

In view of the long-term financing necessitated by a high level of school construction and increased interest rates, interest payments are expected to remain around 3 percent of total school expenditures for the next several years.

Outstanding School Indebtedness

Indebtedness for public schools is incurred by bond sales and long-term loans to finance construction of school facilities, and by taking short-term loans to pay

operating expenses pending receipt of revenue. Although local school systems incur most of the debt for public schools, other governmental units (States, counties, cities, townships, etc.) also assume obligations. In addition, Georgia, Indiana, Kentucky, Maine, Pennsylvania, and Wisconsin have used the "authority plan," in which public schoolhousing authorities are developed as a means of circumventing strict debt limitations. Although the mechanism may vary, each authority finances the construction, supervises the erection, and leases the finished school building to the local education agency. The debt is repaid from rents collected by the authorities. When the bonds have been retired and other obligations of the authority met, the ownership of the building normally passes to the school system.

School indebtedness has generally fluctuated over the years with the amount of school construction. Thus, reflecting a decline in capital outlay during the 1930's and World War II, the end-of-year school indebtedness dropped from \$3.1 billion in 1931–32 to \$2.1 billion in 1945–46. With the upswing in school construction during the postwar period, indebtedness rose to \$4.7 billion for 1951–52, and, between 1961–62 and 1971–72, soared sharply from \$18.8 billion to \$34.7 billion (table 45).

Value of School Property

To obtain some measure of the total amount of money that has been invested in public school plants (including sites, buildings, and equipment), the States were asked to report the original cost of school property plus the cost of all additions and alterations. If information on original cost was not available, values were reported on some other basis, such as replacement costs and insurance appraisals.

Table 46 presents data on the total value of school property and the value per pupil in ADA for the District of Columbia and the 33 States that were able to report this information. This group of States, with almost one-half of the ADA nationally, reported the total value of school property in 1971–72 to be \$40 billion, about \$2,000 per pupil in ADA. Because

the valuation was not always on the same basis, care should be exercised in making State-by-State comparisons.

Economic Indexes Related to Financing Public Schools

Table 50 presents three economic indexes which point up some of the problems faced by individual States in financing public schools: (1) Column 2: educational burden (number of school-age children to be supported by the productive adults in the labor force); (2) Columns 3, 4, and 5: financial ability to support public education; and (3) Column 6: effort (relation between expenditures and resources).

The educational burden is often measured by comparing ratios of the number of school-age children (5–17 years old) per 1,000 adults 21 to 64 years old. In 1971–72, this ratio was 619 children per 1,000 adults in New Mexico (high-burden State) and 450 children per 1,000 adults in New York (low-burden State).

Financial ability to support public schools, as measured by State personal income per pupil in ADA, was more than twice as much in New York (\$29,284) as in New Mexico (\$13,148). Thus, it appears that the poorer States not only have proportionately more children to educate but also have fewer resources to draw upon.

Effort to support public schools, as measured by the percentage that current expenditures for elementary and secondary schools is of State personal income, ranged from 4.12 percent in Missouri to 8.43 percent in Alaska. It should be noted, however, that some of the States that ranked high in "effort" had relatively low levels of per-pupil expenditures. Of the five States making the greatest effort, only one (Alaska) was among the five States with the highest levels of current expenditures per pupil in ADA.

No claim of conclusiveness is made for the economic indexes presented in table 50. Rather, they are offered to show the influence that economic differences among the States have on the types of educational programs they can afford.

NONPUBLIC ELEMENTARY AND SECONDARY SCHOOLS

The growing importance of nonpublic schools in American education is indicated by the increase in nonpublic enrollment from 8 percent of the combined enrollment in regular full-time public and nonpublic elementary and secondary schools at the beginning of the present century to 16 percent in 1968-69. Since 1968-69, the ratio has decreased to around 10 percent in 1971-72. Nonpublic schools, while subject to certain regulatory State controls are under operational control of private individuals or church-affiliated or nonsectarian organizations. Whether operated on a profit or nonprofit basis, nonpublic schools are generally supported by private funds as distinguished from public funds. There were an estimated 5.3 million pupils and 263,000 instructional staff members in nonpublic elementary and secondary schools in 1971-72 (table I). In recent years, Catholic school enrollment has accounted for between 80 and 90 percent of the total enrollment in nonpublic elementary and secondary schools.

Table 51 gives the number of regular nonpublic schools with their enrollment, instructional staff, and high school graduates.

Table 52 presents State data on both public and nonpublic schools—enrollments, instructional staff, and high school graduates, together with the percentage of nonpublic enrollments in all schools. It will be noted that the proportion of pupils attending nonpublic schools varies from State to State. In 1971—72, the proportion that nonpublic school enrollments represented of total enrollments in both public and nonpublic elementary and secondary schools ranged from 17.8 in New York to 1.3 in Utah.

For definitions and sources of data, see page 81.

From reports of public high schools.
The percentagea shown here will not necessarily agree with those shown for the same item in tables 20 and 21 (which give historical data by State), because the enrollment figures used as a base are somewhat different in the two tablea.

Before 1919-20, data for number of different persons employed rather than number of positions. Distribution estimated by Office of Education.

Because of the modification of the scope of "current expenditures for elementary and secondary day schools," data for 1959-60 and later years are not entirely comparable with data from prior years. See footnote 7.

Includes summer achools, community colleges, and adult education. Beginning with 1959-60, also includes community services, formerly classified with "current expenditures for elementary and secondary schools."

Beginning with 1971-72, excludes community colleges and adult education.

9/ Includes supervisors of instruction, principals, classroom teachers, and other instructional staff.

10/ Average daily attendance in elementary and secondary day schools.

11/ Excludes interest on school debt.

12/ The expenditure figure used here is the sum of current expenditures allocable to pupil costs, capital outlay, and interest on school debt.

13/ Per day rates derived by dividing annual rates by average length of school term.

Includes supervisory and superintendency units in two States (New Hampshire and Vermont).

Data are for the 21 States having intermediate administrative units between the State education agency and local school systems. Data for personnel other than the superintendents are not available.

Data for column 8 included in column 11.

Data include 2,036 principals and teachers of the special schools operated by the county superintendents.

Data for 1969-70 school year.

Doea not include personnel classified as employees of local education agenciea, included in table 4.

Data from the Montana School Directory, 1971-72.

Source: Unpublished data for the <u>Education Directory of Public School Systems</u>, 1971-72 (OE-72-107).

Source: <u>Statistics of Public Elementary and Secondary Day Schools</u>, <u>Fall 1971</u> (OE-73-11402).

Includes jointures (two or more school systems combined for the purpose of operating schools), each counted as a single administrative unit.

NOTE.--Data shown here for the number of operating school systems do not agree with comparable data in table 9.

Source for table 9 reported data as of October; source here, as of August.

Source: Statistics of Public Elementary and Secondary Day Schools, Fall 1971 (OE-73-11402).

Totals include data for nonreporting State.

Total does not include data in parentheses since these vocational schools are included in other types of secondary schools according to number of years in school.

Data include 213 continuation high schools.

Column 4 included in column 8.

Column 4 included in column 8.

Column 5, 11, and 12 included in column 9.

Includes 59 special education schools.

Column 5 included in column 6.

Double 50 special education schools.

May include other consupervisory personcel wheo oot reported separately.

Details will not cross-add to total in column 2 because data by sex and level are not available for Montana.

Distribution by sex estimated by Office of Education.

Data from Mootana Education Disrectory, 1971-72.

Distribution based on a sample survey from New Jersey Public School Teacher, 1971 (NJEA S72-1).

| | | | | | | | | | |

Estimated.

Beginning 1959-60, includes Alssks and Hawaii. Net enrollment. Enrollment not cumulative, but as of a specific date.

Enrollment not cumulative, but so of a specific date.

Dets from Statistics of Public Schools, Psll 1967 (0E-20007-67).

Data from Statistics of Public Schools, Psll 1970 (0E-20007-70).

Does not include enrollment in vocational high schools not reported as part of the regular public school system.

Data from Statistics of Public Elementary and Secondary Day Schools, Psll 1971 (0E-73-11402).

Data from Current Expenditures by Local Education Agencies for Free Public Elementary and Secondary Education, 1969-70 (0E-72-34).

Data from 1971-72 Montana Education Directory.

Data from published sinual State or territory report.

Included with North Dakota.

^{1/} 2/3/ 4/5/ 6/7/ 8/9/ 11/ 112/ 13/ 12/ Data not entirely comparable to enrollments reported in former years because formerly semiprivate schools had been designated as public achools by the State department of education.

14/ Less than 500.

Table 20.--Percentage of total population enrolled in public elementary and secondary schools, by State or other area: United States, various years, 1870-71 to 1971-72

| | | | | | | | | | |

^{1/} Number of children 5 to 17 years of age, inclusive.
2/ See footnote 3, table 1.
3/ Exceeds 100 percent. Because of a large number of inmigrants the total cumulative enrollment exceeds school-age population.
4/ Included with North Dakota.

Table 22.--Enrollment, membership, and attendance in public elementary and secondary schools, by State or other area: United States, 1971-72

| State or other area | Enrollment $\underline{1}/$ | Average daily membership (ADM) | Aggregate days membership (thousands) | Average daily attendance (ADA) | d atte | egate sys indance sands) | Average length of term in days (col. 6 # col. 5) | ADA as percent of ADM (col. 5 + col. 3) | ADA as percent of enrollment (col. 5 + col. 2) | Average number of days attended per pupil enrolled (col. 6 + col. 2) |

Figure for a given State includes pupils enrolled for the first time in the United States during the school year and pupils transferring to that State from another during the school year (except those with footnotes 3 and 4).

Includes estimates for nonreporting States.

Net enrollment for the school year.

Enrollment for the school year.

Enrollment not cumulative but as of a specific date.

Not strictly comparable with those of other States because attendance figures include excused absences and enrollment is not cumulative.

Estimated by Office of Education.

to that State from another during the sci

^{1/} Estimated by Office of Education.
2/ Beginning 1959-60, includes Alaska and Hawaii.
3/ Includes excused absences.
4/ Data from published annual Stata raport.
5/ Includes estimate for kindergarten.
6/ Excludes vocational schools not operated as part of the regular public school system
7/ Sourca: Current Expenditures by Local Education Agencies for Free Public Elementary and Secondary Education, 1969-70 (OE-72-34).
8/ Sourca: Expanditures for Public Elementary and Secondary Education, 1971-72 (OE-74-11407).
9/ Included with North Dakota
10/ Data not antirally comparable with ADA reported in former years because formerly semiprivate schools had been designated as public achools by the State Department of Education.
11/ Fewar than 500.

Oata are shown to the extent reported.

Totals include 553 jointly owned buses (Alabama 1; Georgia, 51; Indiana, 367; Kentucky, 9; Louisiana, 32; and Tennessee, 93).

Data for column 13 included in column 12.

Includes 2 boata and 1 airplane.

State of Arizona uses more amall vehicles than large buses because amall vehicles are cheaper to maintain.

Oata for column 14 included in column 12.

Data for column 4 included in column 2.

Table 26.--Selected data on school lunch programs in public elementary and secondary schools, by State or other area: United States, 1971-72

Computed by dividing the total number of pupils served by the number of days the lunch program was in operation. Does not include pupils served only milk or other beverage.

Represents net expenditures from Federal, State, and local funds expended to cover deficit of school lunch and school milk programs divided by current expenditures for elementary and secondary day schools (table 31).

Not comparable with data reported in 1969-70 because of reporting error in that year.

^{3/} 4/ 5/ Data from Expenditures for Public Elementary and Secondary Education, 1971-72 (0E-74-11407) and U.S. Department of Agriculture reports.
6/ Data from U.S. Department of Agriculture reports.

Data are shown to the extent reported.
Data for column 9 included in column 8.
Data supplemented by reports required under Title V, Elementary and Secondary Education Act.
Distribution estimated by office of Education.
Data for column 3 included in column 7.
Partially estimated by office of Education.
Data for columns 9 and 10 included in column 8.
Includes expenditurea for administration at the local level.
Includes adult education and vocational rehabilitation expenditures for administration.

Table 34.--Current expenditures for administration of public school intermediate administrative units, by State: United States, 1971-72

Data are shown to the extent reported.

Includes contracted services, farea for public transportation, and payments in lieu of transportation.

Data included in column 2.

Included adata from Expenditures for Public Elementary and Secondary Education, 1971—72 (OE-74-11407).

Data for columns 4, 6, and 7 included in column 5.

Transportation program in the District of Columbia is normally provided for handicapped children only; hence, computations for cost are not comparable with those of the States.

Distribution estimated by Office of Education.

Estimated by Office of Education.

Data are shown to the extent reported.

| Supplemented by records of the Division of School Assistance to Federally Affected Areas, Office of Education. Includes estimates for nonreporting States.
| Data for column 4 are included in column 5. |
| Data partially estimated by Office of Education. |
| Data for column 6 included in column 5. |

Included are capital outlays by State and local schoolhousing authorities which amounted to \$26,613,723 in Georgia and \$86,687,022 in Indiana. Data are State loans.

Data for column 9 included in column 8.

Data from published annual State report.

Data for column 9 included with fixed charges on table 39.

Data are capital outlay costs of achool plants completed and made available during the school year.

Distribution estimated by Office of Education.

Includes supervisors, principals, classroom teachers, and other instructional staff members.

Based on Consumer Price Index published by the Bureau of Labor Statistics, U.S. Department of Labor. (See appendix I, Technical Notes.)

Beginning in 1959-60, includes Alaska and Hawaii. Does not include District of Columbia for 1967-68.

Data from Statistics of Public Schools, Fall 1967 (OR-20007-67).

Data from Statistics of Public Elementary and Secondary Schools, Fall 1971 (OE-73-11402).

Because of the high cost of living in Alaska, salary data should not be directly compared with data for other States.

Partially estimated by Office of Education.

Data not reported for District of Columbia.

Excludes kindergerten teachers.

Includes salaries of school administrators.

Includes salaries of clerical assistants to instructional personnel.

Includes salaries of attendance personnel.

Excludes vocational schools not operated as part of the regular public school system.

[|] Relates to current expenditures for elementary and secondary day schools.
| Daily expenditures computed by dividing annual expenditure by the average length of school term.
| School facilities for which capital outlay and interest payments are incurred serve other educational programs as well as elementary and secondary schools (junfor colleges, adult education, etc.). However, per-putl expenditures for capital outlay and interest are related to the number of pupils in average daily attendance in elementary and secondary schools, the only such data available.
| Included to these figures are capital outlay, and interest.
| Included in these figures are capital outlay, by nonschool agencies. (See table 43.)
| Because of the high cost of living in Alaska, unit expenditure data for this State cannot be readily compared with those for other States.

Table 49.--Current expenditurea per pupil in average daily attendance in public elementary and secondary schools, by State or other area: United Statea, various years, 1919-20 to 1971-72

^{1/} Does not include outlying areas; beginning in 1959-60, includea Alaska and Hawaii.
2/ Based on Consumer Price Index published by the Bureau of Labor Statistics, U.S. Department of Labor. (See appendix I, Technical Notes.)

J Because of the high cost of living in Alaska, per-pupil expenditure data for this State should not be compared directly with those for other States.

L Estimated by Office of Education.

Excludes vocational schools not operated as part of the regular school system.

Table 50.--Selected educational items related to personal income and other economic data for public schools, by State: United Statea, 1971-72

| State | Number of school- age children (5-17 years) per 1,000 adults (21-64 years) <u>1</u> / | Personal income per capita of total population 1971 2/ | Personal income per school-age child 1/2/ | Personal income per pupil in average daily attendance 2/ | Current expenditures for elementary and secondary day schools as percent of personal income 2/3/ |

2/ Data for public schools only; nonpublic data not available.
3/ Data for public schools estimated by Office of Education.
4/ Data for nonpublic schools only; public school data not available.

APPENDIXES

I. TECHNICAL NOTES

II. REPORT FORMS 0E-2350-11 AND 2350-12

I. TECHNICAL NOTES

These notes, designed to provide background information on the preparation of this publication and to help in interpreting its summarized data, pertain to data limitations, comparability, coverage, adjustments of dollars amounts to degrees of inflation, and the form used in collecting the data.

Limitations of Data

Data for this report were furnished by State and Territorial departments of education of the States, the District of Columbia, and the outlying areas on a questionnaire mailed out by the U.S. Office of Education. It should be recognized that the States have to overcome many difficulties in obtaining complete and accurate information from their numerous local and intermediate administrative units, which, in turn, must report on a uniform basis the data needed for effective planning of local and State educational programs.

Public elementary and secondary education is primarily a State and local responsibility, and records and report systems in each State are designed mainly to meet legal and administrative requirements. However, it is felt that a standard form for collecting data from all of the States and other areas tends to minimize variations in data collection. Handbook II and the later handbooks on school activities, school property, staff, and pupils

which provide uniform educational terminology and definitions were available in each State education agency as a guide to uniform reporting. Where State education agencies have deviated from prescribed definitions and instructions, the statistical tables in this report have been annotated accordingly. As the effort of the States to implement the handbooks progresses, the data reported in this survey will become more complete and accurate.

Comparability with Bureau of the Census Data

The Bureau of the Census collects and publishes data on enrollment and, to some extent, data on the organization and finances of public schools. However, because of differences in data-collection methods. definitions, coverage, and time references, these data are only roughly comparable with those collected by the Office of Education from the various State and other area departments of education.

Geographic Coverage

All references to national totals are for the United States, which, beginning with 1959-60, comprised the 50 States and the District of Columbia, National totals for the years prior to 1959-60 represent totals for the States constituting the United States as of the time to which the data apply. To the extent available, data are shown separately for each of the outlying areas of the United States, namely American Samoa, Canal Zone,

¹ The Common Core of State Educational Information, Office of Education Bulletin 1953, No. 8.

Guam, Puerto Rico, Trust Territory of the Pacific Islands, and the Virgin Islands. However, these are not included in the national totals.

Adjustments in Terms of 1971-72 Dollars

Adjustments of certain expenditure and income data in terms of dollars in 1971-72 purchasing power are based on the *Consumer Price Index* published by the Bureau of Labor Statistics, U.S. Department of Labor. Monthly index numbers were averaged on a July-to-June basis to correspond with the school year.

Estimates of the Population and Labor Force

All population and labor force data were obtained from publications of the Bureau of the Census and the Bureau of Labor Statistics.

Population figures shown for the United States include persons in the Armed Forces stationed in each State, but exclude members of the Armed Forces overseas. Beginning in 1951-52, comparisons were made between the total U.S. population as of July 1 (the beginning of the school year) and the enrollments for the school year. Thus, the population estimates as of

July 1, 1951, were compared with the enrollment data for the school year 1951-52. For all previous years, population estimates were as of the end of the school year.

The 5-to-17-year-olds of the population relate to the civilian noninstitutional population of the United States.

Per capita national income data are based on estimates of the total population, which includes the Armed Forces overseas.

The labor force includes persons 16 years² old and over who were employed or in the Armed Forces. Calendar-year averages of the labor force were converted to a July-to-June basis by taking a simple average of the appropriate calendar-year figures.

National Income and personal Income

Data on national income and personal income were obtained from the Survey of Current Business, published by the Office of Business Economics, U.S. Department of Commerce.

National income is the aggregate earnings of labor and property (before taxes) which arise from the current production of goods and services by the Nation's economy.

Personal income is the current income received by individuals, by unincorporated businesses, and by nonprofit organizations from all sources, including transfer payments (social security payments, veterans' benefits, etc.) and Government interest but excluding transfers among persons.

² Effective January 1967 the lower limit for offical statistics on labor force data was raised from 14 to 16 years of age.

INSTRUCTIONS AND DEFINITIONS OF TERMS

This report-form for the school year ending June 30, 1972 requests educational information for STATISTICS OF STATE SCHOOL SYSTEMS, a biennial publication of the Office of Education. Terminology and definitions follow the Handbook Series of the State Educational Records and Reports Project. It is essential that definitions and explanations in the Handbook be observed in order that reports from the various States may be comparable.

Please note that the tables contain numbers in parentheses for many items adjacent to the data columns. These numbers, for statistical items in Part 1, generally correspond to the numbered definitions in Handbook 1, THE COMMON CORE OF STATE EDUCATIONAL INFORMATION. Attention is also called to the COMBINED GLOSSARY OF STANDARDIZED ITEMS AND TERMS which gives the latest revisions of all definitions used in the Handbook.

Every effort should be made to furnish figures for all items pertinent to your State. Where exact information is not available for any item, carefully made estimates are acceptable, provided they are labeled as such ("Est."). Enter a zero (0) where the figure to be reported is zero and "N. App." in any cell which does not apply to your State. If an item is pertinent to your State but data are not available, enter "N. Av." DO NOT LEAVE ANY TABLE OR CELL BLANK. When reporting on positions of employed personnel, report the sum of the full-time positions and full-time equivalents of part-time positions.

Please explain abnormal increases or decreases from the numbers reported in previous years or major changes in organization or procedures which would substantially affect the data reported.

Tables 1 - 11 of this form are for PUBLIC schools only; tables 12 - 15 are for NONPUBLIC schools.

FOR THE YEAR ENDING June 30, 1972 OR

1972

PART A-2b, STATE ELEMENTARY AND SECONDARY SCHOOL STATISTICS
FINANCE 1971 - 72

STATE OR OTHER AREA

SUBMIT COMPLETED FORM TO

U.S. Office of Education National Cantar for Educational Statistics Élementary-Sacondary Survays Branch 400 Maryland Avenue, SW. Washington, D.C. 20202

INSTRUCTIONS AND DEFINITIONS OF TERMS

This report-form is intended to collect basic financial data for public school systems for all levels of government (State, in-termediate, and local) involved in providing public educational services. This report-form for the 1971-72 school year is similar to the one employed in the preceding biennial survey and conforms to items and definitions in the Handbook Series of the State Educational Records and Reports Project. It is essential that the definitions and explanations in the Handbooks be observed (unless otherwise noted) in order that the reports from the various States may be comparable.

Please note that almost all of the tables contain numbers in parentheses adjacent to the data columns for the items. Numbers correspond to item numbers in Handbook II, Financial Accounting in Local and State School Systems, and in several cases to item numbers in Handbook I, The Common Core Of State Educational Information. The Roman numeral "I" preceding the reference number identifies Handbook I; all other numbers refer to Handbook II. Attention is also

called to the Combined Glossary of Standard Items and Terms, March 1966, which contains some modification and explanatory information of definitions used in many different items.

Every effort should be made to furnish figures for all items pertinent to your State. Where exact information is not available for any item, a carefully made estimate is accept—able, provided it is labeled as such ("Est."). Enter a zero (0) where the amount to be reported is zero and "N. App." in any cell which does not apply to your State. If an item is pertinent to your State but data are not available, enter "N. Av." DO NOT LEAVE ANY TABLE OR CELL BLANK.

Report all amount in dollars. Cents are not to be reported for any item.

Please explain abnormal increases or decreases from the amounts reported in previous years or major changes in or—ganization or procedures which would substantially affect the data reported.

DUE DATE: May 1, 1973
